Need some more time?

You can participate online by visiting www.southoxfordsciencevillage.com, or ask a member of the consultation team for a freepost envelope so you can return your feedback later. Please provide comments to us by the **10th of February 2017**.

Location and Local connections

<p>Do you think the suggested area could be a sustainable and appropriate area for development?</p> <p><input type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> Undecided</p> <p>Why?</p>
--

Ecology

<p>The emerging proposals will seek to retain and enhance the site's valuable ecological features. Do you have any comments to make on how this will be done? (example, substantial landscape buffers to Sandford Break CWS and Bushey Copse)</p>

Flooding and drainage

The proposals avoid any possible problems from flooding by avoiding development in areas of risk. Surface water can be managed through Sustainable Drainage Systems (SuDs). Do you have any comments to make on flooding and drainage?

Sewage treatment works

Development of the site will unlock funding to help manage odours from the Sewage Works. Are there specific measures you would want to see in place?

Masterplan

The illustrative masterplan sets out (in draft form) the possible locations for housing, employment space, educational space, a park and ride, shop space and a large amount of open green space. What do you think?

The University Technical College will be operated by Magdalen College and will complement the existing academy north of Grenoble Road. How do you think we should maximise opportunities for local people?

Do you think that the Park and Ride would be an appropriate way to provide a route from the site to Oxford city centre?

We are proposing three 'local centres' within the emerging plans. These centres will provide shops and community facilities. What services do you think these local centres should provide?

Green Infrastructure Plan

The emerging plans are accompanied by a Green Infrastructure Strategy. This is intended to make landscaping, ecological measures, drainage systems and open green space, as well as pedestrian routes all work together. What do you think of the key features?

Sustainable Transport Strategy

The location of the site means that the opportunity to maximise the amount of local journeys taken by foot and cycle is high. Do you agree?

What improvements to public transportation would you like to see?

General comments

You can use this area to make general comments and raise issues you would like the project team to consider.
